Associations of psychological distress, sleep, and self-esteem among Kosovo adolescents

Zamira Hyseni Duraku, Kaltrina Kelmendi, Liridona Jemini-Gashi

International Journal of Adolescence and Youth 24(4), 511-519, 2018

Mental health among children and adolescents is considered a global public health challenge worldwide. The purpose of this paper was to examine the correlates of psychological distress among adolescents living in Kosovo. A sample of 200 adolescents ($M = 10.8$; $SD = 44$) were assessed using a variety of measures, including psychological distress, sleep behaviors, and self-esteem. The research findings indicate significant correlations between electronic use, bedtime fears/worries and insomnia, and higher levels of psychological distress among the study sample. The research results show positive correlations between self-esteem and lower levels of psychological distress. An examination of gender differences revealed that females tended to report higher levels of sleep, whereas males reported

Children's Exposure to Peer Victimization, Bullying, Perceptions of School Safety, and School Climate Among Albanian and Serbian Students in Kosovo

Authors
Najra Agani

Publication date
2019

Description
Statistics suggest that school violence is prevalent in the Balkan region. However, the Balkan culture in general and Kosovo in particular has paid little attention to peer victimization, bullying, school safety, and school climate considering the transitional period that society went through during the occupation and after the war. Moreover, there is no word in Albanian and Serbian language that describes bullying specifically. In order to explore the prevalence and nature of peer victimization, bullying, children's perceptions of school safety, and school climate in Kosovo, a survey with 385 participants from grades 6th through 9th will be conducted with Albanian and Serbian students.

Coexistence of intimate partner violence and child maltreatment among adolescents in Kosovo

Kaltrina Kelmendi, Zamira Hyseni Duraku, Liridona Jemini-Gashi

Journal of family violence 34 (5), 411-421, 2019

High levels of domestic and intimate partner violence are continuously reported in Kosovo, and child maltreatment by parents is common. This study explores the coexistence of intimate partner violence and child maltreatment and its association with sociodemographic factors. A sample of 208 Kosovar adolescents was assessed using the Conflict Tactic Scale and the Parent-Child Conflict Tactic Scale. The results showed interplay between experiencing intimate partner violence and witnessing violence between parents. The hierarchical logistic regression results showed that adolescents exposed to psychological intimate partner violence had a higher chance of experiencing psychological aggression and corporal punishment by their parents, when controlling for sociodemographic factors (gender, average grades, parents' education, number of sisters/brothers, and financial income). The findings foresee the necessity of comprehensive approaches to family violence phenomena that affect family members, including parents and children. They

Associations between social support, career self-efficacy, and career indecision among youth

Liridona Jemini-Gashi, Zamira Hyseni Duraku & Kaltrina Kelmendi

Current Psychology (2019) | [Cite this article](#)

274 Accesses | 1 Citations | [Metrics](#)

Abstract

Previous research suggests that social support affects both career self-efficacy and career decision-making status. The purpose of this study was to analyze the relationship between social support and career indecision and the role that career self-efficacy plays in this relationship. A series of validated measures assessing social support, career self-efficacy, and career indecision were administered to

Self-esteem, study skills, self-social support, psychological and coping mechanism effects on anxiety and academic performance

Zamira Hyseni Duraku, Linda Hoxha

Health psychology open 5 (2), 205510291, 2018

The purpose of this article is to assess the association of test anxiety and academic performance with study skills, coping mechanism, self-concept, self-esteem, and psychological distress among university and high school students. A series of validated measures were administered to 28 Kosovar students, most of whom were in college (60.3%). Being in college and social support resulted as protective factors for test anxiety. Better study skills, self-concept, and psychological distress were indicative of higher test anxiety. Higher levels of self-esteem were associated with higher student success. Practical implications and research future directions have also been discussed.

Exploring violence socialization and approval of intimate partner violence among university students in Kosovo

Kaltrina Kelmendi, František Baumgartner

Journal of interpersonal violence 35 (5-6), 1082-1102, 2020

Intimate partner violence (IPV) among university students is a prevalent problem in many countries; however, it is not currently recognized in Kosovo as a social issue in terms of research, prevention, or intervention. The aim of this article was to explore the relationship between violence socialization experiences, approval of violence, and IPV perpetration/victimization among university students in Kosovo. The questionnaires were administered to a convenience sample of 700 students of University of Prishtina who were in relationship for 1 month longer. The Revised Conflict Tactics Scale (CTS) was used for measuring physical, psychological, and sexual violence, whereas for measuring violence socialization and violence approval, scales for Personal and Relationships Profile (PRP) were used. Findings from this study show that there were statistically significant gender differences in terms of violence socialization and approval of violence among university students. Similarly, perpetrators and victims of IPV (physical, psychological, and sexual violence) showed higher rates of socialization of violence and

Perceptions of Early Marriage, Educational Aspirations, and Career Goals among Kosovar Adolescents

Zamira Hyseni Duraku, Liridona Jemini-Gashi, Ervin Toçi

Marriage & Family Review 56 (6), 513-534, 2020

Early marriage has a negative influence on youngsters' pursuits toward higher education, with considerable health and social impact worldwide. Educational aspirations, career goals, and early marriage are associated with numerous personal and contextual factors. We aimed to assess the association between sociodemographic and socioeconomic factors and Kosovar adolescents' perceptions on early marriages in adolescent girls, education, and career goals. A sample of 509 adolescents ($N = 294$, 58.0% girls), age ($M = 17.3$; $SD = 1.5$) was assessed using the Perceptions of Early Marriage and Future Education Goals Scale. Approximately half the participants (43.2%) were clear about their future career goals, (44.8%) remain considering options, and three out of four individuals will pursue higher education after high school. Knowledge and financial stability were among the significant reasons for pursuing higher education while the greatest obstacles included poor study habits, lack of money, lack of self-confidence and lack of motivation. Key reasons for early marriage were

community are also examined, such as terms of social support, and the level of importance placed upon the concept by those from different ethnic and geographic backgrounds. The similarities and differences discovered in the results are examined in light of potential mediating factors, such as cultural differences regarding the conceptualization of community. Further implications for policy and practice are also discussed.
